

CALTRAIN ELECTRIFICATION

BURLINGAME FACT SHEET | February 2021

PROJECT OVERVIEW

Over the last decade, Caltrain has experienced a substantial increase in ridership and anticipates further increases in ridership demand as the Bay Area’s population grows. Caltrain Electrification, scheduled to be operational by 2022, will electrify and upgrade the performance, operating efficiency, capacity, safety and reliability of Caltrain’s commuter rail service.

Caltrain Electrification is a key component of the Caltrain Modernization Program and consists of replacing diesel-hauled trains with electric trains for service between Fourth and King Street Station in San Francisco and the Tamien Station in San Jose. The project will include the installation of new electrical infrastructure and the purchase of electric vehicles.

CONSTRUCTION ACTIVITIES

In August 2017, Caltrain began performing work along the railroad corridor in Burlingame.

The activities during this time included locating underground utilities, testing soil conditions, inspecting signal/communication equipment, potholing, and pruning/removing trees in preparation for the installation and operation of the Overhead Contact System that will power electric trains.

| DATE | WORK ACTIVITY | Expected Completion |
|---------------|-------------------------|---------------------|
| In Progress | Potholing | Summer 2021 |
| In Progress | Foundation Installation | Fall 2021 |
| In Progress | Pole/Wire Installation | Fall 2021 |
| February 2021 | Paralleling Station | Fall 2021 |

Expected durations indicates first and last day of activity. Number of actual workdays will be fewer.

FOUNDATION INSTALLATION

Foundation work is underway and will continue over the duration of another 3-6 months. Activities for the foundation construction will include excavation, placement of rebar, concrete fill and electrical grounding. Foundations are typically spaced 180 feet apart along the corridor and crews can complete a total of 2-6 foundations per night.

POLE AND WIRE INSTALLATION

Pole and wire Installation began in fall 2020 and will continue for a duration of 3-6 months. Caltrain will be installing approximately one hundred thirty-nine (139) poles along the Caltrain Right-of-Way in the Burlingame corridor. Poles will vary in height from 30 feet to 50 feet. Poles will be spaced approximately 180 feet apart.

PARALLELLING STATION CONSTRUCTION

Installation of the Paralleling Station is expected to begin in February 2021 and continue for 9 months. The Paralleling Station is an unmanned facility that will provide and regulate electrical power to the electric trains through the Overhead Contact System. The Paralleling Station will contain a single transformer, control house, and access area. Installation of the Paralleling Station will also include installation of two gantry structures up to 63 feet to accommodate the future Burlingame Broadway Grade Separation Project.

WORK HOURS

Work will take place during the day and at night, with night work occurring between 8 p.m. and 6 a.m. There may be occasional 24-hour work on weekends. Caltrain will work with contractors to minimize night work to limit the impact to surrounding communities; however, some work must be performed at night in order to maintain regular Caltrain service. To mitigate noise and other impacts during night and weekend activities, the field team will use acoustical noise barrier blankets and will position lights away from residential and business areas. Caltrain has established a dedicated project hotline and email for residents concerned about these potential impacts.
