SAN JOSE FACT SHEET | January 2019

PROJECT OVERVIEW

Over the last decade, Caltrain has experienced a substantial increase in ridership and anticipates further increases in ridership demand as the Bay Area’s population grows. Caltrain Electrification, scheduled to be operational by 2022, will electrify and upgrade the performance, operating efficiency, capacity, safety and reliability of Caltrain’s commuter rail service.

Caltrain Electrification is a key component of the Caltrain Modernization Program and consists of replacing diesel-hauled trains with electric trains for service between Fourth and King Street Station in San Francisco and the Tamien Station in San Jose. The project will include the installation of new electrical infrastructure and the purchase of electric vehicles.

CONSTRUCTION ACTIVITIES

In December 2017, Caltrain began performing work along the railroad corridor in San Jose.

The activities during this time included locating underground utilities, testing soil conditions, inspecting signal/communication equipment, potholing, and pruning/removing trees in preparation for the installation and operation of the Overhead Contact System that will power electric trains.

Expected durations indicates first and last day of activity. Number of actual work days will be fewer.

FOUNDATION INSTALLATION

Foundation work will start early 2019 and will continue over the duration of 3-4 months. Activities for the foundation construction will include excavation, placement of rebar, concrete fill and electrical grounding. Foundations are typically spaced 180 feet apart along the corridor and crews can complete a total of 2-6 foundations per night.

POLE AND WIRE INSTALLATION

Pole and wire installation will start summer 2019 and continue for a duration of 6-8 months. Caltrain will be installing approximately four hundred sixty (460) poles along the Caltrain Right-of-Way in the San Jose corridor. Poles will vary in height from 30 feet to 50 feet. Poles will be spaced approximately 180 feet apart.

TRACTION POWER SUBSTATION

Installation of the Traction Power Substation (TPS) is underway and continue for 4-6 months. The TPS is an unmanned station that will provide electrical power to the electric trains through the Overhead Contact System. The TPS will be installed directly south of Interstate 880 at Stockton Avenue and will have a footprint of 300 ‘x 150’. The footprint will contain the substation house, six disconnect-switches, two transformers, an access road and a parking lot. Installation of the TPS will also include installation of gantry structures up to 50 feet high.

PARALLELLING STATION CONSTRUCTION

Installation of the Paralleling Station is underway and continue for 4-6 months. The Paralleling Station is an unmanned facility that will provide and regulate electrical power to the electric trains through the Overhead Contact System. Installation of the Paralleling Station will also include installation of two gantry structures up to 50 feet.
WORK HOURS

Work will take place during the day and at night, with night work occurring between 8 p.m. and 6 a.m. There may be occasional 24-hour work on weekends. Caltrain will work with contractors to minimize night work to limit the impact to surrounding communities; however, some work must be performed at night in order to maintain regular Caltrain service.

To mitigate noise and other impacts during night and weekend activities, the field team will use acoustical noise barrier blankets and will position lights away from residential and business areas. Caltrain has established a dedicated project hotline and email for residents concerned about these potential impacts.

CONTACT INFORMATION

Caltrain has established a project information line and project email for Caltrain Electrification to record and respond to questions and comments from residents and stakeholders.

The project information line can be reached at 650.399.9659 or toll free at 800.660.4287

The project email is calmod@caltrain.com

In addition, Caltrain has established a community outreach office at:

2121 S. El Camino Real
Suite A-100
San Mateo, CA 94403

A project representative will be available to answer questions in person from 9:00 a.m. and 5:00 p.m. Mondays through Fridays during construction.
