

CALTRAIN ELECTRIFICATION

PARALLELING STATION CONSTRUCTION NOTICE October 2020 - Summer 2021

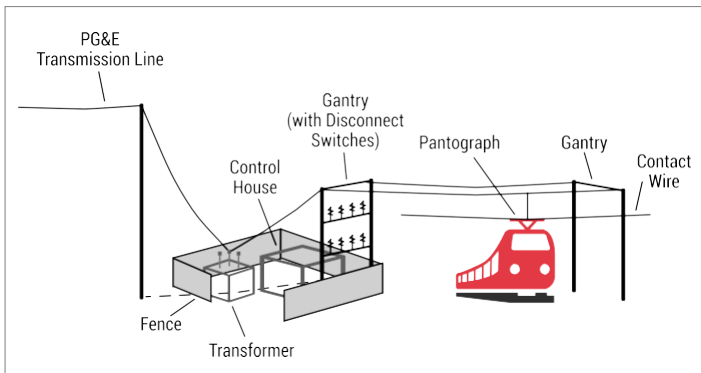

PARALLELING STATION CONSTRUCTION

Caltrain has begun construction of the Paralleling Station facility located at the northeast corner of Mariposa Street and Pennsylvania Avenue. The Paralleling Station is an unmanned facility that will regulate electrical power to the electric trains. The Paralleling Station will consist of:

One transformer- The transformer will take in and convert power to ensure it is consistently sent out throughout the system.

Control House - Located within the facility footprint, housing the controls for the system.

Gantries - H-frame steel structures that support wires perpendicular to the tracks. These wires connect to the overhead contact system and provide power to the trains. One gantry will be housed within the footprint of the facility near the transformers. The other gantry will be located on the opposite side of the tracks from the facility

CONSTRUCTION ACTIVITIES

The construction activities during this time will be the temporary installation of fencing, excavation, laying of a concrete pad, control house construction, transformer delivery and gantry installation. Crews will utilize excavation equipment, and dump trucks for removal and delivery of materials.

A majority of the work will take place during the weekday between 6 a.m. and 3 p.m. There may be night and weekend work required when work is being completed within the railroad track envelope.

CONSTRUCTION AREA

A construction site map and a staging area site map are provided on the reverse of this notice.

Caltrain held public meetings regarding the facility in Summer 2018 and in Spring 2019. To review meeting presentations, please visit www.calmod.org/resources.

PROJECT OVERVIEW

Over the last decade, Caltrain has experienced a substantial increase in ridership and anticipates further increases in ridership demand as the Bay Area's population grows. Caltrain Electrification, scheduled to be operational by 2022, will electrify and upgrade the performance, operating efficiency, capacity, safety and reliability of Caltrain's commuter rail service.

Caltrain electrification is a key component of the Caltrain Modernization Program and consists of replacing diesel-hauled with Electric Multiple Unit (EMU) train system for services between Fourth and King Street Station in San Francisco and the Tamien Station in San Jose. The project will include the installation of new electrical infrastructure and the purchase of electric vehicles.
